

Liu Xu (Daisy)

Senior Automation Test Engineer / SDET | 8+ Years of Experience

+86 17304468366 | liuxu15132@gmail.com | github.com/Xudage6688 | LinkedIn:
Daisy Liu

Key Strengths

- Independently developed **QA Test Agent** (LLM-powered intelligent agent): paste requirement descriptions → one-click generation of complete Xray-format test cases, driving real-world AI adoption in automated test case generation
- Self-developed **QIMAGPT Proxy** (Go-based OpenAI-compatible API gateway): converts LibreChat Web UI into standard OpenAI API, supports tool_calls passthrough, streaming responses, multi-turn conversation context retention – unifying enterprise AI toolchain access
- Ranked **#1** contributor in a 37-member team GitHub repository (QSP/myQIMA Portal automation), consistently top-ranked across all contributors; significant code AI-assisted via Cursor/Claude Code/Copilot, demonstrating strong AI-augmented development productivity
- Pioneered AI-driven performance testing platform **k6**: paste curl → auto-generate maintainable k6 scripts, using ramping-vus executor + production-grade thresholds (p95 < 2s, failure rate < 1%), completing high-concurrency stress tests across order/payment/report scenarios
- Increased LT business automation coverage from **0% to 94%** (core flows 100% covered) and myQIMA Portal core modules to **100%** coverage; reduced regression cycle from 3 days to **4 hours** (efficiency gain **800%+**)
- Led deep integration of Cypress with **Jira Xray** (reuse strategy + bidirectional binding), combined with AI tools for full-chain traceability
- Built self-developed **CircleCI API Toolkit**: one-click build triggers, auto-approval, merge operations – streamlining daily DevOps workflows for AWS-deployed services
- Built self-developed **Jenkins API Toolkit**: automated deployment triggering and status management – closing the loop for legacy EC2-based service deployments
- Developed 4 self-developed toolsets: **QIMAGPT Proxy** (Go), **jira-web-app** (Python/Streamlit DevOps platform, 8.5K LOC, 87% coverage), **Playwright E2E** framework (TypeScript), **MDict Reader** (Next.js + koffi C-FFI, local multi-dictionary lookup)
- Deployed and documented local **Ollama** + **DeepSeek** LLMs, authored knowledge base on AI deployment, exploring frontier AI applications in testing

Technical Skills

- AI & Generative AI Testing:** Self-developed QA Test Agent (LLM-driven intelligent agent for intelligent test case generation); self-developed QIMAGPT Proxy (Go-based AI API gateway); expert Prompt Engineering; local Ollama + DeepSeek LLM deployment; AI-assisted development (daily code generation, test script generation, defect analysis)
- AI Development Tools:** Cursor (primary), Claude Code, GitHub Copilot, OpenCode, Qwen (Tongyi), Tongyi (Tongyi Qianwen), DeepSeek-V4-Flash

- **Programming Languages:** Python (advanced: framework building, DevOps tool development, data processing), JavaScript (Cypress/ES6+), TypeScript (Playwright E2E, Next.js), Go (microservice proxy)
- **Automation Frameworks & Tools:** Cypress 12+ (UI/API, cy.session + cacheAcrossSpecs), Selenium 4.x, Playwright (TypeScript), Appium (iOS/Android), HttpRunner, k6 (cloud-native performance), JMeter, Postman/Newman
- **Test Architecture & Principles:** Page Object Model (POM), data-driven testing, high reusability (60%+), Shift-Left & API-first validation, layered architecture design
- **CI/CD & DevOps:** CircleCI (mainline service pipelines, AWS deployment), Jenkins (pipeline orchestration, PowerShell scripting, parameterized RUN_SCOPE), GitHub Actions, Docker (containerized test environments), Kubernetes basics (pods, services, deployments)
- **Cloud & Infrastructure:** AWS (EC2 for legacy service hosting + Jenkins CI, S3, Lambda, ECS/EKS fundamentals, CircleCI-based deployment architecture)
- **Test Management & Traceability:** Jira + Xray (deep integration, bidirectional sync, auto result upload), TestRail, Zephyr
- **Databases:** SQL (PostgreSQL/MySQL – querying, validation, data setup/teardown)
- **Version Control & Collaboration:** Git (advanced workflows, PR, branching), Docker image building
- **Languages:** English (proficient listening, speaking, reading, writing, 5 years foreign enterprise experience); Mandarin (native)

Professional Experience

QIMA | **Senior Automation Test Engineer** | **2024.08 – Present** | **Shenzhen**

- Ranked **#1** contributor across 37 team members in the QSP/myQIMA Portal automation GitHub repository, consistently leading commit activity; significant code AI-assisted via Cursor/Claude Code/Copilot
- Drove resolution of **139** High/Blocker defects, covering Payment Portal, Booking, Lab Testing, Reports, LT Program, Supplier and all core modules (calculator pricing failures, template rendering, permission control, private window login failures, report filter invalidation, Approve group invoice API errors, Shein payment integration, DUPRO special client order booking failures, Lab editing issues, manual currency selection, Style photo sorting, etc.)
- Increased LT business automation coverage from 0% to **94%** (core flows 100% covered), and myQIMA Portal core modules to **100%** (Booking, Payment, Lab Testing, Reports, LT Program, Supplier, Calculator); added high-value automated test cases for Public API interfaces
- Led deep Cypress + **Jira Xray** integration: automatic test result sync-back, full traceability from test plan/case to execution, using reuse strategy + bidirectional binding
- Independently developed **QA Test Agent** (LLM-driven intelligent agent): paste requirement → one-click generation of complete Xray-format test cases
- Self-developed **QIMAGPT Proxy** (Go): encapsulated QIMAGPT LLM capabilities as OpenAI-compatible API gateway, supporting tool_calls passthrough, streaming responses, multi-turn context retention, Web-Search interception – unifying AI toolchain access
- Implemented AI-driven performance testing platform **k6**: paste curl → auto-generate production-grade k6 scripts (ramping-vus executor + thresholds p95 < 2s, failure rate < 1%), completing high-concurrency stress tests across order/payment/report multi-scenarios
- Operated CI/CD infrastructure across **AWS cloud deployment architecture**: mainline services deployed via **CircleCI** pipelines, legacy services hosted on **EC2** with **Jenkins CI**

- Built self-developed **CircleCI API Toolkit**: one-click build triggers, auto-approval, merge operations via CircleCI REST API – significantly accelerating daily DevOps operations for mainline services
- Built self-developed **Jenkins API Toolkit**: automated deployment triggering and status management via Jenkins REST API – closing the deployment loop for EC2 legacy services
- Built QSP + Jenkins CI/CD pipeline in Jumpserver environment: commit → automated regression → result sync-back to Jira closed-loop
- Developed **Jira Affected Projects One-Click Extraction Tool**: API Token configuration, field ID auto-detection, project list export, PR quick open
- Maintained 20+ knowledge base documents (k6 guide, **Ollama + DeepSeek local LLM deployment**, Docker, Git, blockchain whitepaper, etc.), continuously sharing frontier AI-in-testing practices
- Participated in defining QSP automation testing standards (8 major documents: Page Object pattern, API testing guidelines, data management, security practices, code quality standards, etc.)
- Optimized Jenkins + Cypress 12 + PowerShell pipeline: unlimited suite expansion, RUN_SCOPE parameterization, automatic failure notification to relevant team members

KPMG | **Senior Test Engineer / Team Leader** | **2021.09 – 2024.05** | **Shenzhen**

- Responsible for **Volvo Enjoy Driving Finance Leasing Platform** (financial services system), led 10-person testing team to deliver on time with high quality
- Built full automation framework from 0 to 1 using **Python + Selenium 4.x + pytest + HttpRunner + Docker**, with layered architecture design (Test Cases → Page Objects → Core Framework → Utilities)
- Implemented **Appium** full-platform automation: covering iOS/Android native/hybrid/Web applications
- Business flow coverage: user authentication, pre-audit (qualification/risk assessment), order submission, e-signing, fund disbursement, credit approval, subscription (individual/enterprise)
- Established Jenkins CI/CD pipeline, shortened release cycle by **50%**
- Achieved **60%+** test code reusability through POM pattern + data-driven testing design

Qian Da Ma (Everyday Fresh) | **Senior Test Engineer** | **2021.06 – 2021.09** | **Shenzhen**

- Led automation testing framework development for fresh supply chain management system
- Responsible for full-chain automated test case design and execution for order, inventory, supply chain modules
- Responsibilities: writing/executing test cases per plan, Charles packet capture API testing, defect logging & tracking, requirement/case review, development solution discussions, test report submission, regular progress & risk reporting to management
- Test platforms: APP / Web / Mini-program
- Project discontinued due to company strategic adjustments

Ji De Cai | **Test Engineer** | **2019.06 – 2021.03** | **Shenzhen**

- Taimu Valley self-developed WeChat-like chat application: user communication/social + contribution value earning/upload
- Designed and executed test cases for payment, VIP purchase, shopping core modules
- Participated in performance testing, identified and optimized system bottlenecks under concurrent scenarios

Yi Quan Jing Pin | **Test Engineer** | **2017.08 – 2019.05** | **Shenzhen**

- Quality assurance for water purifier e-commerce platform
- Web full-function manual testing, online issue troubleshooting, regression validation

Personal Projects

MDict Reader | Local MDict Dictionary App | Next.js 16 + TypeScript + koffi C-FFI

- Full-stack local dictionary reader: **Next.js** web UI + **koffi** FFI bridge to call a C-language MDict engine (mdict.dll/libmdict.so), enabling multi-dictionary lookup, autocomplete, and resource loading entirely offline
- Implemented MDD resource resolution with multi-candidate key parsing (handling inconsistent key formats across dictionary creators) and disk fallback for externalized assets (images, CSS, audio)
- Built browser-side **Speex (.spx) audio decoder** using emscripten-compiled libspeex (asm.js): Ogg demux → header parsing → Speex.decode → 16bit WAV conversion, enabling pronunciation playback in Chrome/Edge (only Firefox has native Speex support)
- Designed process-level caching: lazy dictionary open with background warm-up, 64MB MDD resource cache (LRU), disk file cache keyed by mtime

QIMAGPT Proxy | AI Proxy Service (Open Source) | Go + Python

- Converted QIMAGPT (LibreChat) LLM Web UI into **OpenAI-compatible API** gateway, enabling any OpenAI SDK-compatible tool (OpenClaw, Claude Code, Cursor, etc.) to directly consume QIMAGPT model capabilities, unifying enterprise AI toolchain access
- Supported streaming (SSE) and non-streaming chat completions, full OpenAI tool_calls/tool_choice passthrough (including streaming response parsing), enabling AI agent tool call closed-loop
- Automatic token refresh (10 min before expiry, 30s rate limit), multi-turn conversation context retention (client IP + model-based session storage), WebSearch interception (auto-convert web_search to web_fetch + Google search URL)
- Kong reverse proxy adaptation (browser header injection), custom model mapping (gpt-4o → gpt-5.4), multi-endpoint routing
- Chrome/Edge browser extension (cookie-extractor), one-click Token extraction, supports Microsoft OAuth authentication
- Python SDK zero-config integration: `OpenAI(base_url="http://localhost:8318/v1")` ready-to-use

jira-web-app | DevOps Automation Platform (Self-developed) | Python 3.12 + Streamlit

- Integrated DevOps automation platform, 8.5K lines of code, **87%** test coverage, serving daily Jira/CircleCI/Jenkins operational needs
- 7 built-in tools: Jira Affected Project analysis (multi-project mapping + intelligent deduplication), Service Image Extractor (GitHub container version comparison), PR Quick Open, CircleCI Pipeline management (trigger/query/monitor/approval), Jira Issue management (create/query/batch update Resolution), Jenkins one-click deploy (sequential/concurrent modes + real-time log), Test Tools Suite
- Multi-user configuration isolation, concurrent optimization (ThreadPoolExecutor, 33 boards parallel query), cross-platform startup (Windows .bat/.ps1 + Linux/Mac .sh), .venv isolated environment
- Standardized logging (SafeLogger), strict exception handling, no `except: pass`

Playwright E2E | myQIMA Portal E2E Automation (Self-developed) | TypeScript + Playwright

- Playwright + TypeScript automation framework, covering Login, Supplier Management, PSI Draft, Checklists, User Profile modules
- Authored comprehensive coding standards document (PLAYWRIGHT_STANDARDS.md), including navigation wait strategies, assertion standards, CDP debugging workflow

Education & Certifications

Intermediate System Integration Project Management Engineer	National Certification, 2022–2023
Sichuan Normal University	Bachelor's Degree in International Economics & Trade, 2012–2017

Interests & Hobbies

Guitar | Team Activity Planning | Open Source Contribution | AI-Driven Testing Innovation
